

Vol. 102, August 2006

Tapping mode atomic force microscopy (AFM) topographic images of L3-liposome.

The AFM images of electron-beam-developed areas in the scales of $30 \times 30 \mu\text{m}^2$ (left) and $5 \times 5 \mu\text{m}^2$ (right). L3-liposome was prepared on the patterned substrate by electron-beam lithography technique. This method is greatly anticipated for biosensor application.
