

Vol. 103, June 2007

Typical fluorescence images of immunostained neurosphere sections.

The neurosphere sections were counterstained with TO-PRO-3 (blue) and immunostained with a proliferating cell marker (anti-BrdU antibody: green) and a glial cell marker (left-hand image: anti-GFAP antibody, red) or neuronal cell marker (right-hand image: anti- β III tubulin antibody, red). Image cytometry revealed new findings in terms of the localization of specific types of neural cells and the regional fluctuation of cell density in neurospheres.
